Liquid Vegetable Capsules

Due to our use of easy to swallow Liquid Vegetable Caps, **Thermo Genetics Extreme™** is **100% BIO-AVAILABLE!!** This means that there are no other steps in the breakdown process between swallowing our supplement and its absorption into your body. In caplets, tablets, and conventional capsules there are several factors that occur in the breakdown process which lead to the loss of key ingredients in a supplement. **Thermo Genetics Extreme™** design cuts out the middle men and gives you the most rapid release possible!!! Over time oxidation occurs in gelatin capsules. This means the ingredients inside of the capsules will eventually harden. Due to our advanced manufacturing process, internal oxidation does not occur in our Liquid Gel Vegetable Caps!!

THERMO GENETICS EXTREME™

Thermo Genetics Extreme™ is so incredibly unique and different that you will feel the difference the very first time you take it!

Manufactured with 100% vegetable capsules. All ingredients are rigorously tested and carefully sourced to ensure proper potency.

CUTTING EDGE FAT BURNING

TGE (Thermo Genetics Extreme™) is so incredibly unique and different that you will feel the difference the very first time you take it! This is a product designed for those who are serious about burning fat! We use a synergetic blend of **16 cutting edge, fat burning ingredients** that have been clinically tested and proven to better target problem areas such as the abdomen, legs, buttocks, and hips. The Genetics Tech™ research team has developed a truly unique delivery system that makes all other diet and energy products obsolete!

* What is Gelatin?

Thermo Genetics Extreme is GELATIN FREE! Gelatin is a protein produced by partial hydrolysis of collagen extracted from the bones, connective tissues organs, and some intestines of animals such as domesticated cattle, pigs, and horses. The natural molecular bonds between individual collagen strands are broken down into a form that rearranges more easily. Gelatin melts when heated and solidifies when cooled again. Together with water, it forms a semi-solid colloid gel.
